START HERE ON THE HOME PC

Second Prompt Portable Master 0.1

One master instruction file connecting every prompt, background asset, waterfall layer, character animation, reference image, source file, and portable Godot path in the copied Second_prompt folder.

COPY RULE: Place the complete Second_prompt folder directly inside the Godot project root. Do not copy only selected files. Do not rename folders or assets before the first successful import.

Portable root

Every path in this document assumes the folder is available as:

```
res://Second_prompt/
```

Windows drive letters and the original Desktop path are intentionally not used. The same PDF works after copying the folder to another computer or another project location.

Inventory snapshot: 507 existing files plus this master PDF (508 files after creation).

HOME-PC START PROCEDURE

Copy, Open, Verify, Then Implement

Required copy operation

- Copy the complete Second_prompt folder into the root directory that contains project.godot.
- Open the project in Godot and wait until the initial import finishes. Do not interrupt the first import.
- Open and read res://Second_prompt/0.1_second_prompt_master.pdf first.
- Before changing scenes, verify that every res:// path in the Environment and Character sections resolves.
- Inspect the existing project scene tree, player, camera, multiplayer code, input map, and naming conventions. Integrate with the current architecture instead of replacing finished systems.
- Keep all original files. If optimized copies are needed later, create them separately and preserve the source pack.

Copy-paste starting instruction for the home agent

```
Read res://Second_prompt/0.1_second_prompt_master.pdf completely. Treat it as the master plan. Then read the three linked supporting PDFs in the stated order. Audit all listed res:// paths before editing. Use the exact supplied PNG artwork; do not generate or redraw assets. Implement the cemetery continuation, Zombie Villager, Skeleton Warrior, living parallax environment, responsive underground coverage, and the bridge-only waterfall. Preserve existing gameplay and multiplayer behavior. Work phase by phase, run the project after each phase, and report every created or modified project path.
```

Path handling rules

- Use forward slashes in Godot resource paths even on Windows.
- Quote paths containing spaces or the comma in zombies, skeletons.
- Do not hard-code C:/Users/... paths in scenes or scripts.
- Sort zero-padded animation frames lexicographically; _000, _001, ... already sort correctly.
- Do not reference generated .godot/imported files directly. Reference the original res:// PNG files.

DOCUMENT CONNECTION MAP

Read the Prompts in This Order

ORDER	PORTABLE PATH	PURPOSE
0.1	res://Second_prompt/0.1_second_prompt_master.pdf	Start here. Portable roots, complete inventory, dependencies, phases, and acceptance tests.
1	res://Second_prompt/silent_city_cemetery_continuation_prompt.pdf	Continue the completed road into the cemetery; story flow, darkness, grave encounters, level direction.
2	res://Second_prompt/silent_city_story_zombie_skeleton_godot_prompt.pdf	Create the Zombie Villager and Skeleton Warrior scenes, animations, AI, Easy tuning, and storyline behavior.
3	res://Second_prompt/silent_city_waterfall_environment_extraction_prompt.pdf	Use extracted environment assets, responsive ground, living parallax, exact 2D house rules, and bridge-only waterfall.

Authority and conflict rules

- The newest explicit instruction wins when an older preview conflicts with a later continuation.
- The cemetery contains no waterfall. The waterfall appears only below and behind the bridge.
- The catalog placement preview and generated mockup are visual references only, never runtime sprites.
- The houses and environment remain exact supplied 2D PNGs. Realism comes from placement, lighting, fog, parallax, sound, and animation - never AI redrawing.
- One single moon is used and must not repeat with parallax mirroring.

ENVIRONMENT PATH MAP

Every Background Asset and Its Connection

PORTABLE PATH	RUNTIME ROLE
res://Second_prompt/zombies, skeletons/cemetery_background_single_moon.png	Single sky/moon source. Use once; never repeat the moon.
res://Second_prompt/background_assets/distant_hills.png	Far parallax hills/forest layer.
res://Second_prompt/background_assets/background_fog_01.png	Slow rear fog layer.
res://Second_prompt/background_assets/background_fog_02.png	Second fog layer at a slightly different speed/opacity.
res://Second_prompt/background_assets/house_01.png	Exact 2D house sprite; grounded middle-distance placement.
res://Second_prompt/background_assets/house_02.png	Exact 2D house sprite; grounded middle-distance placement.
res://Second_prompt/background_assets/house_03.png	Exact 2D house sprite; grounded middle-distance placement.
res://Second_prompt/background_assets/house_04.png	Exact 2D house sprite; grounded middle-distance placement.
res://Second_prompt/background_assets/broken_chimney.png	Ruined middle/near-background landmark.

Reference-only environment files

- res://Second_prompt/zombies, skeletons/generated photo.png - original extraction catalog and layout guide; never import as a runtime background.
- res://Second_prompt/background_assets/cemetery_assets_comparison_mockup.png - composition reference only; it contains an obsolete cemetery waterfall placement.
- res://Second_prompt/zombies, skeletons/location_arrow.png - road endpoint/bridge location reference.
- res://Second_prompt/zombies, skeletons/tone.png - darkness/tone reference.

Living layer connection

- Sky/moon: nearly fixed Camera2D parallax, about 0.02-0.05; one instance only.
- Hills/forest: far parallax, about 0.10-0.18.
- Fog: about 0.20-0.30 plus subtle local drift; no network synchronization.
- Houses: about 0.35-0.45; grounded, no vertical bobbing, original aspect ratio preserved.
- Graves/trees: nearer silhouettes around 0.60-0.75, still behind gameplay.

BRIDGE WATERFALL PATH MAP

One Assembly, One Location

ORDER	PORTABLE PATH	ROLE
1	res://Second_prompt/background_assets/waterfall_cliff.png	Rock source/lip behind bridge.
2	res://Second_prompt/background_assets/waterfall_back.png	Rear water/glow.
3	res://Second_prompt/background_assets/waterfall_000.png	Main animation frame 000; 182 x 180 shared canvas.
4	res://Second_prompt/background_assets/waterfall_001.png	Main animation frame 001; 182 x 180 shared canvas.
5	res://Second_prompt/background_assets/waterfall_002.png	Main animation frame 002; 182 x 180 shared canvas.
6	res://Second_prompt/background_assets/waterfall_003.png	Main animation frame 003; 182 x 180 shared canvas.
7	res://Second_prompt/background_assets/waterfall_004.png	Main animation frame 004; 182 x 180 shared canvas.
8	res://Second_prompt/background_assets/waterfall_005.png	Main animation frame 005; 182 x 180 shared canvas.
9	res://Second_prompt/background_assets/waterfall_006.png	Main animation frame 006; 182 x 180 shared canvas.
10	res://Second_prompt/background_assets/waterfall_007.png	Main animation frame 007; 182 x 180 shared canvas.
11	res://Second_prompt/background_assets/waterfall_front.png	Front water veil/detail.
12	res://Second_prompt/background_assets/waterfall_mist.png	Soft impact mist.
13	res://Second_prompt/background_assets/waterfall_splash.png	Lower impact/splash.

- Create one bridge_waterfall.tscn with a Node2D root and child layers in the exact order above.
- Load waterfall_000.png through waterfall_007.png into one AnimatedSprite2D SpriteFrames animation at approximately 8 FPS, loop enabled.
- Keep every main frame on the same scale, pivot, offset, and centered setting; never trim frames independently.
- Anchor the assembly in world space below/behind the bridge. Do not attach it to the player or camera and do not parallax-repeat it.
- Bridge, player, enemies, and collision stay in front. Waterfall decorations have no collision.

CHARACTER SOURCE ROOTS

Skeleton Warrior and Zombie Villager

CHARACTER	PRIMARY RUNTIME ROOT	SOURCE ROOT
Skeleton Warrior	res://Second_prompt/zombies, skeletons/Skeleton_Warrior_1/PNG/PNG Sequences/	res://Second_prompt/zombies, skeletons/Skeleton_Warrior_1/
Zombie Villager	res://Second_prompt/zombies, skeletons/Zombie_Villager_2/PNG/PNG Sequences/	res://Second_prompt/zombies, skeletons/Zombie_Villager_2/

Complete animation-library rule

- Build a complete SpriteFrames library for each character using every PNG in every PNG Sequences subfolder.
- Animation names should be normalized to snake_case in Godot while source paths remain unchanged.
- Import all animations even when an Easy enemy initially uses only idle, walk, attack, hurt, and death. Reserved animations must remain available for future states.
- Use each folder's exact zero-padded order. Never mix Skeleton and Zombie frames.
- Keep Vector Parts, AI, EPS, SCML, Unity packages, readmes, and licenses as source/reference material; do not substitute them for the PNG-sequence runtime pipeline.

Both characters contain the same 17 animation folders and frame counts shown above. Exact per-character roots and every individual frame path are listed in the manifest appendix.

SOURCE FOLDER	FRAMES	GODOT NAME / CONNECTION
Dying	15	dying - terminal death animation
Falling Down	6	falling_down - knockdown/fall reaction
Hurt	12	hurt - damage reaction
Idle	18	idle - default state
Idle Blinking	18	idle_blinking - occasional idle variation
Jump Loop	6	jump_loop - airborne loop
Jump Start	6	jump_start - takeoff/start
Kicking	12	kicking - alternate close attack
Run Slashing	12	run_slashing - moving melee attack
Run Throwing	12	run_throwing - moving ranged action
Running	12	running - fast movement/chase
Slashing	12	slashing - primary melee attack
Slashing in The Air	12	slashing_in_air - aerial melee
Sliding	6	sliding - slide/knockback/dodge
Throwing	12	throwing - ranged action
Throwing in The Air	12	throwing_in_air - aerial ranged action
Walking	24	walking - patrol/slow chase

ENEMY IMPLEMENTATION CONNECTION

Slow, Powerful, Readable Easy Enemies

Proposed output paths

OUTPUT	PROPOSED PROJECT PATH
Skeleton scene	res://Scenes/Enemies/SkeletonWarrior.tscn
Skeleton script	res://Scripts/Enemies/skeleton_warrior.gd
Zombie scene	res://Scenes/Enemies/ZombieVillager.tscn
Zombie script	res://Scripts/Enemies/zombie_villager.gd
Cemetery background	res://Scenes/Environment/CemeteryBackground.tscn
Bridge waterfall	res://Scenes/Environment/BridgeWaterfall.tscn

Required enemy state connection

- Idle -> Walking patrol -> player detected -> slow chase -> clear attack telegraph -> attack -> recovery -> chase/idle.
- Hurt interrupts movement only when intended; Dying plays once, disables hitboxes, then removes or deactivates the enemy safely.
- Zombie Villager is slower, heavier, and readable. Skeleton Warrior may react slightly faster but still telegraphs every attack.
- Easy mode reduces aggression and approach speed, not visual clarity. Enemies can feel powerful through damage and impact while leaving fair recovery windows.
- Use animation events or explicit timing for attack hitboxes; do not keep damage areas active for the full animation.
- Spawn enemies from graves in staged groups. Update the existing HUD enemy counter and prevent duplicate spawns.
- In multiplayer, the authority controls spawning, damage, health, death, and rewards. Clients display replicated animation and effects.

Do not assume output paths blindly

The proposed output paths are defaults. First inspect the project's existing folders and naming style. If equivalent scene/script locations already exist, extend them and report the actual paths instead of creating duplicates.

LEVEL CONNECTION AND RESPONSIVE VIEW

Cemetery, Camera, Ground and Bridge

Level sequence

- Continue the existing road at the arrow-sign endpoint into the cemetery. Do not replace the completed road.
- Create the living cemetery using separate sky, hills, forest, fog, house, grave, lamp, fence, and prop nodes.
- Graves trigger controlled Zombie and Skeleton encounters as described by the story PDFs.
- Remove waterfall imagery and water audio from the cemetery.
- At the bridge/ravine section, instantiate the one BridgeWaterfall scene below and behind the bridge.

Responsive underground coverage

- Keep the top walking surface at the existing world Y position.
- Repeat native soil tile rows downward until the camera's visible bottom plus two-row overscan is covered.
- Do not stretch the soil texture and do not move the whole platform downward.
- Recalculate only when viewport size, fullscreen state, stretch mode, or camera zoom changes.
- Verify 1280 x 720, 1366 x 768, 1600 x 900, 1920 x 1080, 2560 x 1440, ultrawide, fullscreen, and windowed resizing.

Preservation rules

- Do not change the existing HUD, player movement, input actions, camera limits, bridge collision, saved progress, or network protocol unless required and tested.
- No second moon, repeated unique house, visible asset card border, black viewport gap, or floating house is acceptable.
- Do not use AI image generation anywhere in the implementation pipeline.
- Use the exact supplied PNGs and Godot nodes/materials/effects only.

EXECUTION PLAN

Implement and Verify in Phases

PHASE	WORK	REQUIRED CHECK
0	Audit project and every res://Second_prompt path.	No missing source paths; current project still runs.
1	Import complete Skeleton and Zombie SpriteFrames libraries.	All 17 animations per character load in correct order.
2	Create/extend enemy scenes, state machines, hitboxes, and Easy tuning.	Idle, movement, attack, hurt, death, counters, authority work.
3	Continue road into cemetery and place grave encounters.	No regression in completed road; encounters spawn once.
4	Assemble living 2D cemetery layers from exact PNG assets.	One moon, grounded houses, smooth parallax, fog drift, no AI art.
5	Extend soil rows responsively below camera.	No bottom edge or black gap at all target resolutions.
6	Assemble bridge-only waterfall from all waterfall layers.	Frames 000-007 loop at about 8 FPS behind bridge; positional audio works.
7	Run multiplayer, performance, resolution, and regression tests.	Authority is correct; no jitter, duplicates, missing paths, or warnings.

Definition of done

- Every runtime PNG path resolves and is used in the intended library, scene, or environment layer.
- Every source/reference file remains in the folder and is classified in the manifest.
- All three supporting PDFs have been read and their latest requirements are implemented.
- The game runs without parser errors, missing resources, invalid node paths, import failures, repeated moons, or viewport gaps.
- The final report lists every created/modified project path, tests run, remaining limitations, and any intentionally reserved animations.

Do not declare completion after merely importing assets. Completion means the cemetery, enemies, responsive terrain, living background, and bridge waterfall are integrated, tested, and playable.

PORTABLE INVENTORY SUMMARY

What the Copied Folder Contains

EXTENSION	COUNT	TREATMENT
.png	466	Runtime frames/assets plus reference images; classify by path.
.eps	26	Editable source only; preserve, do not load as runtime sprites.
.txt	4	License/readme; preserve and review.
.pdf	3	Implementation prompt documents.
.ai	2	Editable source only; preserve.
.scml	2	Spriter/vector animation source; preserve; PNG sequences are default runtime path.
.unitypackage	2	Unity source package; not used by Godot runtime.
.url	1	Source link/info; preserve.
[no extension]	1	Metadata or platform file; do not use at runtime.
.pdf	+1	This master 0.1 PDF is added after the snapshot.

Runtime versus source/reference

- Use all runtime PNG frames and environment assets in Godot as described.
- Use reference images and PDFs to guide placement, tone, story, and implementation; never flatten them into gameplay sprites.
- Preserve editable AI/EPS/vector/SCML files for future editing, but do not create duplicate runtime animation pipelines unless needed.
- Preserve licenses, readmes, source URLs, and Unity packages even though they are not Godot runtime resources.

FULL FILE MANIFEST

Every Portable Path in Version 0.1

This appendix records every file present when the master was generated. Paths use res:// and remain portable after the complete Second_prompt folder is copied into another Godot project root.
