SILENT CITY

Story Mode - Design Ideas

A concept for a three-level connected campaign, taking the player from the Outer Graveyard to the Wizard's Sanctum.

1. Campaign Overview

Story Mode is one connected campaign. The player does not select Easy, Medium, and Hard as separate versions. Instead, the player progresses through three areas where danger, darkness, and story importance gradually increase.

Main Menu	Level 1	Level 2	Level 3	Ending
Start Story Mode	Outer Graveyard	Forgotten Path	Wizard's Sanctum	Boss defeated -> Credits

2. Level Progression

Level	Story role	Enemies	Main gameplay	Atmosphere
1. Outer Graveyard	Introduce Silent City and the mystery.	3 skeletons 2 rats	Basic combat, stable platforms, exploration.	Brightest area; warm lampions begin to appear.
2. Forgotten Path	Reveal that the Wizard controls the creatures.	1 skeleton 1 golem 2 rats	Stronger enemies, falling platforms, guided path.	Half-dark; yellow lampions mark the route.
3. Wizard's Sanctum	Reach the source of the corruption and end the threat.	1 wizard boss 1 minotaur	Boss arena, defenses, falling platforms.	Darkest area; yellow light marks the route and arena.

3. Enemy Design

Enemy quantity remains limited. Difficulty increases through strength, behavior, health, attacks, and hazards - not by adding large enemy groups.

Level 1 - Outer Graveyard

Three skeletons and two rats. Enemies have low health and slow, predictable attacks. This section teaches combat and movement.

Level 2 - Forgotten Path

One skeleton, one golem, and two rats. The golem is the main threat: high health, strong close-range attacks, and deliberate movement.

Level 3 - Wizard's Sanctum

One Wizard boss and one Minotaur. The Minotaur pressures the player at close range, while the Wizard controls the arena from distance.

4. Lighting and Navigation

Lampions create atmosphere and help navigation at the same time. Yellow light should indicate the correct route, safe ground, and hazards. Easy is more visible, Medium is half-dark, and Hard is the darkest area.

5. Falling Platforms

This mechanic is used mainly in Levels 2 and 3. The player lands on a platform, it shakes or changes appearance, a short warning delay starts, then it falls. The first use should teach the mechanic in a safe space.

6. Boss, Ending, and Credits

In the Wizard's Sanctum, the Minotaur physically guards the arena while the Wizard controls it using teleportation, barriers, and dangerous areas. After victory, remaining hazards are disabled, a short ending scene plays, and the credits open.

7. Story Delivery

The story should be learned through environmental clues, short dialogue, and changes in music and lighting. The player should first suspect that something is wrong in the city, then discover that the Wizard controls the creatures, and finally reach his sanctum.

PORTABLE PATH RULE

silent_city_story_mode_design_ideas.pdf

> Whenever a prompt, plan, or implementation note refers to another PDF, image, tileset, asset folder, scene, or supporting document, the reference must use a **relative path** from the current document or the agreed project root.

Do not use a fixed drive letter, Windows username, home folder, or any other computer-specific absolute path.

Keep the complete **Graveyeard_Tilesets_Objects** folder structure together when copying it to another computer. The document folder can then refer to its sibling asset folders with paths such as `../GraveyardTileset` and `../GraveyardTileset_second`.
