SILENT CITY

Storyline Draft

Long ago, Silent City was protected by three ancient guardians: the Stone Golem, the Ice Golem, and the Ash Golem.

The Stone Golem was created from the bones of the earth. It protected the city walls and stood against every physical threat. The Ice Golem came from the frozen mountains. It guarded the city's gates and watched for danger. The Ash Golem was born from the remains of an ancient fire. It protected the city from destruction, but its power was difficult to control.

The three guardians were not wizards, and they did not use magic. Their strength came from their bodies, their fists, and their feet. Together, they kept Silent City safe for many years.

Then a powerful Wizard arrived.

The Wizard wanted to control the ancient energy beneath the city. He corrupted the city and turned its dead into enemies. He also awakened the Minotaur, an enormous warrior who became his strongest servant.

The Wizard knew that the three guardians could stop him, so he separated them and weakened their cores. Without their full power, the guardians could not protect the city. Silent City became silent, dark, and full of monsters.

The player chooses one of the three Golems. The chosen Golem awakens in the Outer Graveyard with a damaged core and no clear memory of what happened. Around the graves, the dead are moving, and the city is slowly being consumed by darkness.

The Golem begins moving through the graveyard and discovers the first signs of the Wizard's corruption. The city is not simply abandoned. Something is controlling the creatures and changing the land itself.

The Golem continues toward the Forgotten Path, an old road that once connected the guardians' sacred places. The road has been damaged by the Wizard's power. Platforms have become unstable, and the path is filled with stronger creatures.

Along the way, the Golem discovers the truth: the Wizard did not destroy the guardians completely. He broke their memories and weakened their cores because he feared their strength. The Golem understands that restoring its own core is the only way to reach the Wizard.

The path finally leads to the entrance of the Wizard's Sanctum. The Minotaur is waiting there. It was created to protect the Wizard and will not allow the Golem to pass.

The Minotaur attacks with enormous strength. It charges, strikes the ground, and tries to destroy the platforms beneath the Golem. The fight is not only a battle of strength; the Golem must remain calm and use everything it learned during the journey.

After the Minotaur is defeated, the Golem enters the deepest part of the sanctum and finds the Wizard.

The Wizard does not fight like the Golem. He teleports, creates magical barriers, changes the arena, and uses the corrupted energy of the city against his enemy. He believes that physical strength can never defeat magic.

But the Golem does not need magic. It reaches the Wizard through determination, endurance, and physical strength. During the final battle, the Golem destroys the corrupted core that gives the Wizard power.

The Wizard is defeated. The darkness begins to disappear from Silent City. The creatures stop moving, the city becomes quiet again, and the damaged land slowly begins to recover.

The Golem's core becomes whole. It remembers the purpose of the three guardians: they were not created only to fight. They were created to protect the people and the future of the city.

The Golem looks over Silent City as the first light returns.

> The Wizard once said: 'You were built to protect this city.' The Golem answers: 'No. I was built to choose what is worth protecting.'

Silent City is saved, but the story of the three guardians is not forgotten. The credits begin.

PORTABLE PATH RULE

silent_city_storyline_english.pdf

> Whenever a prompt, plan, or implementation note refers to another PDF, image, tileset, asset folder, scene, or supporting document, the reference must use a **relative path** from the current document or the agreed project root.

Do not use a fixed drive letter, Windows username, home folder, or any other computer-specific absolute path.

Keep the complete **Graveyeard_Tilesets_Objects** folder structure together when copying it to another computer. The document folder can then refer to its sibling asset folders with paths such as `../GraveyardTileset` and `../GraveyardTileset_second`.
